OK   Cancel

1. Flags To Be Displayed On page
English
Set the flags you wish to display or not. (//'ar', = hide 'ar', = show 'ar'= last flag to be displayed.

How to use as you will see in the extension properties we have a choice of 34 flags that we can use on one page at one time. We do not need to use all 34 flags you can use as many or as little as you wish. When selecting which flags you wish to use you will notice that each flag has three property options these are as follows: Example **// 'en',** this property is used when you do not wish to display a flag on the page when you wish to display a flag then we use this property **'en',** finally we have the property 'en' this is only used when the last flag has been selected to be displayed on page using this stops any further flags being used and displayed...

Note I have used the English flag in this example, for displaying other flags on your page simply change these properties to the flags that you wish to use also note you do not need to include your own flag on the page this is not required as you page doesn't need translated to your own language as it is already displayed on page, you should only add flags that you wish your page to be translated to Example if your page is in German or French then you may want to add the English, Italian or even the Dutch flag so when the user clickds on there map the page gets translated.

2. Language Preference Code
Language Country Code
language you will be translating FROM (default is english)
