

jQuery Montage - Version 1.0

The jQuery Montage extension is based on Pedro Botelho's Automatic Image Montage script (<http://tympanus.net/codrops/2011/08/30/automatic-image-montage/>). This script will automatically create a montage from a set of images with the option to fill all the gaps.

See this demo:

<http://tympanus.net/Development/AutomaticImageMontage/>

Fill last row

If enabled, there will be no gap in the end of the container. The last image will fill any white space left.

Margin

Specifies the space between images in pixels.

Minimum width/height

The minimum width and height that a picture should have.

Maximum height

The maximum height that a picture should have.

Alternate the height value for every row

Enable this option to alternate the height value for every row. The height will be a random value between 'min' and 'max'.

Opacity

The opacity option can be used to set a different opacity on mouse over (hover). For example set the default opacity to 0.6 and the hover opacity 1.0. This makes highlights the active image while the other image fade in the background.

Images

In this section you can add, edit and remove images. Each image can have a link to another page. To add multiple images at once, hold down the SHIFT key while clicking the 'Add' button.

How to install this extension so it is available in Quick 'n Easy Web Builder?

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

/Documents/Quick 'n Easy Web Builder/extensions/

License agreement

This extension is not officially supported; it is made available as an extra service for the registered users of Quick 'n Easy Web Builder that find it useful. It is provided "AS IS" without warranty of any kind, either expressed or implied.

Requirements

Quick 'n Easy Web Builder 1.5 or higher
