

## Leaflet Maps

Leaflet is the leading open-source JavaScript library for (mobile-friendly) interactive maps (<https://leafletjs.com/>)

This extension is a simplified version of the OpenStreetMap extension (<https://wysiwygwebbuilder.com/openstreetmap.html>).

It only includes maps that do not require an API key and it does not require jQuery or leafletproviders.js, which makes this a lightweight solution for adding maps to your website.

- Add multiple markers to the map with colored icons and popup text.
- Zoom support.

### Latitude/Longitude

Specify the coordinates for the map center. Please visit <https://openstreetmap.org/> to find the location.

### Markers

Specifies markers on the map.

For each marker you can set the Latitude, longitude, text and icon color.

### Style

Specifies the map style. This extension has built-in support for 10 map variants.

### Zoom

Specifies the zoom level.

Note that not all maps support the high zoom levels.

**Full Width**

If the extension is used with a layout grid, then it's possible to make the map flexible (width: 100%).

Make sure you also set the height to 'fixed' otherwise height will be 0!

### **How to install this extension so it is available in Quick 'n Easy Web Builder?**

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

My Documents\WYSIWYG Web Builder\system\extensions\

### **Requirements**

Quick 'n Easy Web Builder 9 or higher

### **License Agreement**

This extension is not officially supported; it is made available as an extra service for the registered users of Quick 'n Easy Web Builder that find it useful. It is provided "AS IS" without warranty of any kind, either expressed or implied.
