

## **geoPlugin redirect**

Redirecting visitors based on country using standard JavaScript is challenging due to limited access to precise geolocation information, cross-origin security policies, unreliable IP-based geolocation, asynchronous nature of geolocation APIs, and user privacy concerns. Server-side solutions are often preferred for more reliable and privacy-friendly implementations.

This extension uses the geoPlugin service (<https://www.geoplugin.com>) to dynamically redirect website visitors based on their IP geolocation. For instance, users from Spain can be directed to a dedicated Spanish website, while German users are redirected to a tailored German website, and so on. You have the flexibility to configure distinct URLs for each country, allowing precise customization.

### **Default URL**

Specifies the default URL for country codes that are not in the list.

### **Countries**

Provide a list of country codes along with their corresponding URLs to customize redirection settings. Note that if the country code is not in the list, then you can enter it manually.

### **Protocol**

Specifies the protocol for accessing the geoPlugin service: http or https. Normally, you should use https. But this may not work if you test the page in local preview. In that case, you can (temporally) set this to http.

### **Acceptable Use Policy**

<https://www.geoplugin.com/aup>

### **Privacy Policy and User Agreement**
